

# Questions and comments

## I. QUESTION FORM PROF. HUANG

why do you say you have a better precision than Liu Fang? Presentation mistake, change into: The measured cross section is consistent with previous results from BaBar [4] and BESIII [21], but with the larger statistical magnitude, we have a better precision than BaBars result.

## II. QUESTIONS FROM MR. LIU

- **P3L9 R-scan data luminosity is not high among BES data.**

Removed;

- **P3L10 The reference of the luminosity measurement**

Including in data's references [23,24];

- **P6L6 Background progress**

Change to quote first 3 background in the topology analysis;

- **P9L19**

Change "become stable" to "converge";

- **P11L15**

Now the Ref.[20]'s link works regular;

- **P16L6**

It's a mistake, now it works well.

## III. COMMENTS FROM MR. SUN

- **Change the Introduction of BESIII detector into BESIII's template**

Done;

- Contain 4 digits after the decimal point for data energy

Done.
