Summary

- Closer to true value after rapidity correction
- Different results between centrality definitions with b and RefMult3
- Comparison to STAR UrQMD analysis
 - Similarities
 - Multiplicity peak @ 0 (large b out of minimum bias)
 - RefMult3 maximum $\sim < 120$ (similar RefMult3 definition)
 - RefMult3 dependence of cumulants (different shape of b dependence)
 - Differences
 - C_4/C_2 ($-0.5 < y < 0$) ~ -0.5 (~ -0.75 in STAR paper figure)
 - C_4/C_2 ($|y| < 0.5$) ~ -5 (~ -4 in STAR paper text)
